

Clay'sCars.com – Project Demo

Presented by: Clay Vaughn

A used car listing aggregator for Madison, Indiana.
One place to browse local dealership inventory.

Presentation Roadmap

1. Introduction & Problem
2. Demo Overview
3. Key Features
4. Automation Highlights
5. System Architecture
6. Closing Summary

Customer Problem

Madison residents currently must visit several dealership websites to view used cars for sale.

Each site has a different layout, making comparison difficult.

Clay'sCars.com solves this with a clean, unified experience.

Live Demo Overview

We'll demonstrate how a user selects a car make/model and instantly receives results from 7 local dealerships.

We will show desktop and mobile views.

Key Features

- Dropdown menu for simple search
- Mobile-responsive design
- Card-based vehicle layout
- Automatic data collection from local sites
- No login or contact form required

System Automation

- Web scraping tools collect listings daily
- Car data is auto-structured into JSON format
- No user input needed beyond dropdown selection
- Page renders listings automatically

System Architecture

- Front-End: HTML/CSS/JS
- Back-End: Scrapers (Python/Cheerio)
- Deployment: GitHub Pages (UI) + Render (backend)
- Data: JSON cache updated via scraping

Thank You
